NEW QUESTION: 1

Which data format is NOT supported by Alibaba Cloud Message Service?

- A. JSON
- B. VERBOSE
- C. SIMPLIFIED
- D. XML

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 2

A developer received a response code of 409 when trying to use a KMS key via the API. Given that a 409 response was returned, which of these states could the KMS key be in? (Number of correct answers: 3)

- A. Disabled
- B. PendingCreate
- C. PendingDeletion
- D. PendingImport

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 3

Which of these are good ways to secure access to your API deployed on Alibaba Cloud API Gateway?

(Number of correct answers: 3)

- A. Use HTTPS to encrypt requests.

- B.** Allow only internal IP addresses to call the API.
- C.** Use OpenID Connect to authenticate requests.
- D.** Enable API Gateway to connect to backend services in an Alibaba Cloud VPC network group. This guarantees the security of API requests.
- E.** Configure security keys for API Gateway.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 4

Which of the following programming languages are supported by the Alibaba Cloud SDK?
(Number of correct answers: 3)

- A.** Java
- B.** Swift
- C.** PHP
- D.** Python
- E.** Bash shell

Answer: **A,C,D** ([LEAVE A REPLY](#))

Explanation

<https://www.alibabacloud.com/help/doc-detail/74712.htm>

NEW QUESTION: 5

Which of the following are correct, regarding RAM users? (Number of correct answers: 3)

- A.** RAM users do not "own" the resources that they create (those belong to the Alibaba Cloud account itself), and RAM users cannot generate and pay their own individual bills (costs accrue to and are billed to the master Alibaba Cloud account).
- B.** RAM users belong to an Alibaba Cloud account, but they can also operate as independent accounts with their own private resources, not visible to the primary Alibaba Cloud account.
- C.** RAM users can be created under a single Alibaba Cloud account, corresponding to employees, systems, or applications.
- D.** RAM users must be authorized by the Alibaba Cloud account to log in to the console or use the API to manage the resources owned by the Alibaba Cloud account.

Answer: **B,C,D** ([LEAVE A REPLY](#))

NEW QUESTION: 6

Which of the following statements about migrating data into and out of Object Storage Service (OSS) are correct? (Number of correct answers: 3)

- A.** Online migration supports both migrating buckets at a time, and migrating all the data under an Alibaba Cloud account at a single time.
- B.** A migration job occupies the network resources of the source and the destination. To ensure business continuity, we recommend that you specify a rate limit for a migration Job or run the migration job during an off-peak period.

C. You can migrate data between OSS buckets in any of the following conditions: Buckets are located within the same region, buckets are located across regions and buckets belong to different Alibaba Cloud accounts.

D. You cannot migrate data between OSS buckets if the data at the source is stored in a bucket of the Archive type.

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 7

Which of the following are types of backend services that API Gateway supports? (Number of correct answers: 3)

A. Function Compute

B. Log service

C. Resources In a VPC

D. CloudMonitor Service

E. HTTP(s) service

Answer: C,D,E ([LEAVE A REPLY](#))

NEW QUESTION: 8

In Alibaba Cloud RocketMQ, messages are kept for up to _____ days. We recommend configuring a monitoring service to watch the consumption status, and intervene manually when "not consumed but to be deleted" message alarms occur.

A. 3

B. 4

C. 5

D. 2

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 9

Which of the following operations can be performed through Log Service sAPI? (Number of correct answers:

3)

A. Collect logs based on Logtail configuration and Logtail machine group information

B. Access control for different users

C. Create a Logstore, write and read logs to the Logstore

D. Deliver logs to OSS for storage and analysis

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 10

Log Service uses a semi-structured data model to define a log. This mode contains five data fields:

Topic, Time, Content, Source, and Tags. Log Service has different requirements for the format of each field in the log. Which of the following fields cannot be empty characters? (Number of correct answers: 4)

- A. Time
- B. Topic
- C. Source
- D. Content
- E. Tags

Answer: A,B,C,E (LEAVE A REPLY)

NEW QUESTION: 11

A developer runs a web application on a physical machine in an IDC. The machine is running Ubuntu Linux.

Which of the following is the recommended method if he wants to migrate this web application onto an Alibaba Cloud ECS instance?

- A. Use a third-party image creation tool to create an image from the physical server. Upload the image to the ECS console to turn it into a custom image. Then, use the custom image to create ECS instances.
- B. Use a third-party image creation tool to create an image from the physical server. The image is then uploaded to Alibaba Cloud Object Storage Service (OSS) for storage. In the ECS console, import that image from OSS, then, create an ECS instance from the custom image.
- C. Use SMC(Server Migration Center) to collect data from the origin physical server. Create an intermediate ECS instance on Alibaba Cloud and wait for the data transfer to complete. Then generate a new image directly from that intermediate ECS instance.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 12

Which

of the following parameter locations should be specified for the parameter of key1 where the request URL is in the form: `http://somesite.com/test?key1=[value1]` ?

- A. Parameter Path
- B. HTTP Header
- C. Query
- D. HTTP Body

Answer: A (LEAVE A REPLY)

NEW QUESTION: 13

Which of the following permission control policies does Object Storage Service (OSS) provide for access to objects stored in a bucket? (Number of correct answers: 4)

- A. Object Policy

- B. IntranetAccess
- C. ACL
- D. Dynamic blacklist
- E. Bucket Policy
- F. STS authorization
- G. RAM Policy

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 14

A developer have written a web application using a microservice architecture, in such a architecture, the client (web browser or mobile application) first initiates a request. The request first reaches the load balancer, then goes through an authentication service, a billing service, then requests a resource, and finally a result is returned. How many spans does such a call chain consist of?

- A. 5
- B. 3
- C. 4
- D. 6

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 15

What are the advantages of using Elastic Container Instance (ECI) to deploy applications compared with using ECS? (Number of correct answers; 2)

- A. Startup in seconds without the need to reserve resources
- B. Stronger isolation between instances
- C. Low maintenance, low costs
- D. Less significant visualization layer performance losses

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 16

You want to deploy a LAMP development environment in Alibaba Cloud's Singapore region, and you want to simultaneously bind a domain name and configure HTTPS. Which of these services can help you accomplish this quickly and easily?

- A. Elastic Container Instance (ECI)
- B. Alibaba Cloud Container Service for Kubernetes (ACK)
- C. Elastic Compute Service (ECS)
- D. Simple Application Server (SAS)

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 17

On which operating systems can you install Alibaba Cloud command line tools? (Number of correct answers:

3)

- A. Windows
- B. Linux
- C. macOS
- D. Android

Answer: A,B,C (LEAVE A REPLY)

Explanation

<https://www.alibabacloud.com/blog/how-to-manage-your-alibaba-cloud-linux-server-from-the-command-line-in>

NEW QUESTION: 18

For business scenarios with strong data reliability requirements or financial business scenarios with regulatory requirements related to data durability and availability, RDS MySQL provides a remote backup mechanism to improve reliability. Which of the following is correct, regarding RDS's remote disaster recovery capabilities?

(Number of correct answers: 3)

- A. The primary database (the one to be backed up) must have an Alibaba Cloud Intranet address
- B. RDS realizes real-time synchronization between the master instance and the remote disaster recovery instance through Data Transmission Service (DTS)
- C. When an outage occurs in the area where the primary instance is located, and neither the primary instance (Master) nor the standby instance (Slave) can be connected to, the remote disaster recovery instance can be switched to the primary instance
- D. When the database deletion operation is performed on the master instance, the operation will also be synchronized to the disaster recovery instance

Answer: (SHOW ANSWER)

NEW QUESTION: 19

Which of the following configurations cannot improve the stability, reliability or availability of an Alibaba Cloud Scaling Group? (Number of correct answers: 3)

- A. In the process of creating a Scaling Group, associate multiple Server Load Balancers
- B. Select multiple VPCs when creating the scaling group
- C. Choose a variety of different ECS types when creating your Scaling Configuration
- D. When creating the scaling group, select multiple Vswitches in multiple Zone within a Region

Answer: A,B,C ([LEAVE A REPLY](#))

NEW QUESTION: 20

Which of the following data volume types is not supported by Elastic Container Instance (ECI)?

- A. ConfigFile
- B. EmptyDir
- C. FixedVolume
- D. NFS

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 21

When you use SQL statements to access tables in a database without an index configured, a full table scan will be performed. If a table contains a large amount of data, this kind of scan will access a large amount of data and consume a lot of the database's resources. Which of the following options are best practices when creating database indexes? (Number of correct answers: 3)

- A. table should not contain more than 6 indexed fields.
- B. Applies indices to fields that contain many records.
- C. Adhere to the rightmost prefix principle when using composite indexes.
- D. Add an index to a field that is frequently queried but does not frequently perform add, delete, or modify operations.
- E. Apply indexing to fields of fixed length (preferably not long fields).

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 22

A certain project of Enterprise A (called Project-X) moves to the cloud and will need to use a variety of s Alibaba Cloud resources, such as ECS instances, RDS instances, SLB instances, and OSS storage space. There are multiple employees on the project who need to operate these cloud resources. Because each employee has different job responsibilities and requires different permissions, what is the WRONG approach to resource management?

- A. Create RAM users each employee, and set login passwords or create AccessKey credentials as needed
- B. When creating RAM for users, give each user both web console AND AccessKey credentials: there is no need to keep these separate

C. Use system policies to bind reasonable permissions policies to users or user groups, and customize policies for more fine-grained control

D. When there are multiple RAM users under a cloud account, create user groups to classify and authorize RAM users with the same responsibilities

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 23

What are the required parameters for the Python SDK to create a client to access Alibaba Cloud's API?

(Number of correct answers: 3)

A. access.keyjd

B. access.key.secret

C. regionjd

D. zone jd

E. vpcjd

Answer: A,B,C ([LEAVE A REPLY](#))

Explanation

<https://www.alibabacloud.com/help/doc-detail/53090.htm>

NEW QUESTION: 24

You can create an event notification rule in Message Service and push notifications to the specified consumer in the form of messages, to receive events from specified Alibaba Cloud resources. Which of the following options are correct statements about the Message Service (MS) service? (Number of correct answers: 2)

A. Message Service provides synchronous notifications to ensure the consistency between the message acknowledgment and event processing.

B. The event notification message is retained within the valid time. When you fail to receive an event message, the event notification message is retried based on the specified retry policy.

C. The consumer type of the event notification message can be HTTP Server, Queue, or Topic.

D. Event Notifications can cross regions.

Answer: (SHOW ANSWER)

NEW QUESTION: 25

If a user finds that the Content Delivery Network (CDN) cache hit rate is low, what could be the reason?

(Number of correct answers: 3)

A. The origin site has a large number of dynamic resources.

B. HTTP Header settings may cause cache misses.

- C. When the website has low traffic, the CDN will receive fewer requests and this will result in a lower cache hit rate.
- D. Insufficient bandwidth was selected when enabling the CDN service, causing the service capacity reach its limit too early.
- E. Cache configuration is inappropriate (ex. overly short Cache Expiry Time for popular files).

Answer: C,D,E ([LEAVE A REPLY](#))

NEW QUESTION: 26

A developer recently discovered that their company's application is beginning to suffer performance degradation as a result of increased user demand for the application. After some analysis, the major bottleneck is discovered to be the RDS database instance which hosts the company's databases, "A" and "B". The developer plans to use the DTS data migration solution to move one of the databases to a new RDS instance.

Which of the following statements is correct? (Number of correct answers: 3)

- A. Create a reverse data migration task and start it to migrate subsequent incremental data from target Instance database B to source instance database B.
- B. After disconnecting the connection between the source instance database B and the application, you need to log in to the source database B to check the session messages to ensure that no new sessions performed write operations.
- C. The database account used for data migration must have read and write permissions. To ensure database security, please delete the database account used for data migration or reclaim related write permissions after data migration is completed.
- D. The code for the application will have to be rewritten once this migration is complete.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 27

Which of the following statements about PolarDB's endpoint(s) is NOT correct?

- A. The primary endpoint supports read/write splitting.
- B. The endpoint of the PolarDB MySQL database includes the cluster endpoint and the primary endpoint.
- C. Cluster endpoints support read/write splitting.
- D. Through a cluster endpoint, applications can connect to data nodes.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 28

Serverless Workflow allows you to orchestrate distributed tasks in sequence, branch, and parallel modes, and ensure that tasks are reliably coordinated according to your workflow logic. Which of the following service integration modes is not supported by Serverless Workflow?

- A. Asynchronous mode

- B. Request response mode
- C. Synchronization mode
- D. Waiting for callback mode

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 29

Which of the following is NOT a feature of Alibaba Cloud's Cassandra database service?

- A. Enterprise-level capabilities such as disaster tolerance, backup and recovery, security, and monitoring across data centers
- B. Supports both narrow and wide tables, providing flexible schema functions
- C. Cluster storage, strong expansion of read and write capabilities
- D. Centerless distributed architecture

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 30

Which of the following statements describe the traceID and spanID in a service tracking system (such as Zipkin) correctly? (Number of correct answers: 3)

- A. When the user's request enters the system, a globally unique traceID will be generated on the first layer of the calling network.
- B. TraceID is used to distinguish the sequence of calls between different services of the system, spanID is used to concatenate all the paths that a certain request traverses in the system.
- C. The traceID will be called with each layer and passed back continuously, so through traceID, the path of a user request in the system can be connected in series.
- D. SpanID can locate the position of a request in the system call, and who its upstream and downstream dependencies are respectively.

Answer: A,B,D ([LEAVE A REPLY](#))

NEW QUESTION: 31

A job hunting website stores user's resumes in Object Storage Service (OSS) The current resume upload process is as follows:

7. Users upload resumes
2. The server responds to the upload request
3. The resume is uploaded to the server
4. The server uploads the resume to OSS

Which of the following methods can be used to upload objects to OSS without requiring Step 3?

- A. Form Upload
- B. Append Upload
- C. Multipart Upload
- D. Simple Upload
