NEW QUESTION: 1

Universal Containers (UC) is implementing Service Cloud UC's contact center receives 100 phone calls per hour and operates across North America ,Europe and APAC regions. UC wants the application to be responsive and scalable to support 150 calls considering future growth. what should be recommended test load consideration

- A. Testing load considering 10xthe current call volume.
- B. Testing load considering 50% more call volume.
- C. Testing load considering half the call volume.
- D. Testing load considering current call volume.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 2

Universal Containers CUC) is working with Salesforce CPQ, which uses configuration SObjects to drive business logic.

What are two best practice recommendations an architect should propose to allow UC to deploy CPQ features as part of their CI/CD process?

Choose 2 answers

- A. Use an open source SFDX plugin and version control.

- B. Build an Apex framework to deploy CPQ records.
- C. Use a third-party product.
- D. Use data loader to deploy CSV files.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 3

Ursa Major Solar (UMS) has used Aura components significantly in its Salesforce application development. UMS has established a robust test framework and the development team follows the Salesforce recommended testing practices. UMS team uses Salesforce's test tool To check for common accessibility issues.

In which two environments the UMS team can call Aura accessibility tests?

Choose 2 answers

- A. WebDriver Test
- B. ACCTEST
- C. AuraDriver Test
- D. JSTEST

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 4

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A. When to test a new UC feature release if there are issues.
- B. How to roll back to the previous Salesforce release if there are issues.
- C. How to test existing functionality to ensure no regressions are introduced.
- D. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 5

In Architect has been working on a large project for the past 6 months. This project must be live by the end of the current month. Which two planning techniques should the Architect use to ensure all metadata changes deploy smoothly and on time? Choose 2 answers

- A. Create a new sandbox and perform a test deployment to that environment
- B. Ensure all code that is being deployed is checked into source control
- C. Validate the final deployment package against production prior to go-live
- D. Upload a change set from sandbox to production as early as possible

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 6

Universal Containers (UC) has decided to improve the quality of work by the development teams. As part of the effort, UC has acquired some code review software licenses to help the developers with code quality.

Which are two recommended practices to follow when conducting secure code reviews?

Choose 2 answers

- A.** Conduct a review that combines human efforts and automatic checks by the tool to detect all flaws.
- B.** Generate a code review checklist to ensure consistency between reviews and different reviewers.
- C.** Use the code review software as the tool to flag which developer has committed the errors, so the developer can improve.
- D.** Focus on the aggregated reviews to save time and effort, to remove the need to continuously monitor each meaningful change.

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 7

Universal Containers (UC) currently uses the org development model and utilizes the Salesforce CLI as the deployment tool. After the feature release artifact (a .zip file) has been tested in a lower sandbox, it is being deployed to the full sandbox for performance testing and production deployment readiness check-Since quick deployment options are not being used, what is the correct way to deploy the artifact to the full sandbox?

- A.** Authorize to the Full sandbox org; Validate with `sfdx:mdapi:deploy`; On successful validation, deploy with `sfdx:mdapi:deploy`
- B.** Authorize to the Full sandbox; validate with `sfdx:source:deploy`; On successful validation, deploy with `sfdx:mdapi:deploy`
- C.** Authorize to the Full sandbox org; Validate with `sfdx:source:deploy`; On successful validation, deploy with `sfdx:source:deploy`
- D.** Authorize to the Full sandbox org; Validate with `sfdx:mdapi:deploy`; On successful validation, deploy with `sfdx:source:deploy`

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 8

There has been an increase in the number of defects .Universal Containers (UC) found the root cause to be decreased in quality if code. Which two options can enforce code quality in UC's continuous integration process? Choose 2 answers

- A.** Introduce manual code review before deployment to the testing sandbox.
- B.** Introduce manual code review before deployment to the production org.
- C.** Introduce static code analysis before deployment to the testing sandbox.
- D.** Increase the size of the testing team assigned to the project.

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 9

Universal Containers has automated its deployment process using Metadata API. However, they found that Metadata API doesn't support all the components yet. What should be done to address this?

- A. Use AppExchange products to deploy unsupported components.
- B. Use the force.com IDE for deploying the unsupported components.
- C. Deploy unsupported components manually before/after deployment.
- D. Use change sets for deploying all the unsupported components.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 10

Which are two key benefits of fully integrating an agile issue tracker with software testing and continuous integration tools? Choose 2 answers?

- A. Developers can collaborate and communicate effectively on specific user stories.
- B. Developers can see automated test statuses post code commit on a specific user story.
- C. Developers can use the committed code's build status directly on the user story record.
- D. Developers can observe their team velocity on the burn chart report in the agile tool.

Answer: B,C (LEAVE A REPLY)

NEW QUESTION: 11

Universal Containers has a deadline to retire a business -critical application that will no longer be supported on a specific date. What should an Architect recommend?

- A. Business Continuity Plan
- B. Executive Leadership
- C. Agile Methodology
- D. Requirements Traceability Matrix

Answer: A (LEAVE A REPLY)

NEW QUESTION: 12

Universal Containers has many backlog items and competing stakeholders who cannot agree on priority.

What should an architect do to overcome this?

- A. Organize a sprint planning meeting with the Scrum team
- B. Facilitate the design of a prioritization model with the stakeholders
- C. Take over prioritization for the stakeholders
- D. Allow the delivery teams to pick the best work for the business

Answer: A (LEAVE A REPLY)

NEW QUESTION: 13

Universal Containers (UC) is midway through a large enterprise project. UC is working in an agile model, and currently has four-week iterations, with a branching strategy

supporting this approach. UC operates in a strict regulatory environment, and has dedicated teams for security, QA, and release management. The system is live with users, and a serious production issue is identified at the start of a sprint, which is narrowed down to a bug in some Apex code.

Which three approaches should an architect recommend to address this bug?

Choose 3 answers

- A. Fix the bug in a hotfix branch.
- B. Attempt to fix the bug directly in production.
- C. Wait until the next release to deploy the fix.
- D. Investigate potential data impacts.
- E. Seek stakeholder approval for the hotfix.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 14

Universal Containers (UC) is considering implementing a minor change policy for a series of low-risk user stories that are commonly received by the UC admins. The policy would allow admins to make these changes directly in production. UC does not have continuous integration/continuous delivery (CI/CD) in place.

Which three best practices should the architect suggest UC follow for their new change policy? (Choose three.)

- A. Minor changes do not need to be documented and can be made at any time
- B. Downstream environments will not be automatically updated when production changes
- C. CI/CD is required in to successfully manage minor changes
- D. Minor changes should be thoroughly documented and follow some type of standard cadence
- E. All changes should still be tested

Answer: C,D,E ([LEAVE A REPLY](#))

NEW QUESTION: 15

A year has passed since a project has gone live and a developer is looking to make an update to an existing Apex class, but is unsure of its purpose. What artifact from the original project should be leveraged to determine the purpose of the class?

- A. Requirements Traceability Matrix
- B. Test Sign Off Document
- C. Test Execution Plan
- D. User Acceptance Test Scripts

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 16

An Architect is working on a Universal Containers project, and due to security concerns they cannot provide the Architect with production access. Instead, a central release

management team will be responsible for performing production deployments for all development teams. How should an Architect leverage the Metadata API to ensure any metadata components necessary to deploy the project's functionality are properly communicated to the release management team?

- A.** Create a change set in each sandbox and download the package.xml file for the release management team
- B.** Provide a spreadsheet of all components and utilize the metadata API's readMetadata call
- C.** Send a package.xml file with associated metadata in a .zip file to the Release Management team
- D.** Provide the Release Management team a copy of the audit trail from the sandbox you wish to deploy from

Answer: C (LEAVE A REPLY)

NEW QUESTION: 17

Due to several issues, Universal Containers wants to have better control over the changes made in the production org and to be able to track them.

Which two options will streamline the process? (Choose two.)

- A.** Allow no code/configuration changes directly in the production org.
- B.** Use the Force.com IDE to automate deployment to the production org.
- C.** Make all code/configuration changes directly in the production org.
- D.** Use Metadata API to automate deployment to the production org.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 18

Universal Containers (UC) innovative apps division is releasing an application which can be installed in their trading partners Salesforce environment. The partners can then build on top of the application with process builders and triggers so the container booking

process can be integrated with the trading partners own processes. What is the recommended mechanism for releasing the application?

- A. Change Sets.
- B. Managed Package.
- C. Unmanaged Package.
- D. Zip file deployable by Force.Com Migration Tool.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 19

Universal Containers (UC) has a recruiting application using Metadata API version 35, and deployed it in production last year. The current Salesforce platform is running on API version 36. A new field has been introduced on the object Apex page in API version 36. A UC developer has developed a new Apex page that contains the new field and is trying to deploy the page using the previous deployment script that uses API version 35. What will happen during the deployment?

- A. The deployment script will pass because the new field is backward compatible with the previous API version 35.
- B. The deployment script will fail because the platform doesn't support the previous API version 35.
- C. The deployment script will pass because the new field is supported on the current platform version.
- D. The deployment script will fail because the new field is not known for the previous API version 35.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 20

Universal Containers is working on the next phase of development for their Salesforce implementation involving a large amount of custom development. Which two strategies should be considered to address a critical production issue occurring in the middle of development? Choose 2 answers

- A. Utilize one branch for both development and production bug fixes to avoid out-of-sync branches and simplify deployment
- B. Utilize a source control system to allow separate branches for current development and production bug fixes
- C. Create separate branches for current development and production bug fixes and deploy the fix with current development when ready
- D. Refresh a sandbox for replication of the issue and testing the use -case scenarios once the code is fixed

Answer: B,D (LEAVE A REPLY)

NEW QUESTION: 21

Universal Containers has many backlog items and competing stakeholders who cannot agree on priority.

What should an architect do to overcome this?

- A. Allow the delivery teams to pick the best work for the business.
- B. Facilitate the design of a prioritization model with the stakeholders.
- C. Organize a sprint planning meeting with the Scrum team.
- D. Take over prioritization for the stakeholders.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 22

5. Universal Containers (UC) is planning to move to Salesforce Sales Cloud and retire its homegrown on-premise system. As part of the project, UC will need to migrate 5 million Accounts, 10 million Contacts, and 5 million Leads to Salesforce.

Which three areas should be tested as part of data migration?

Choose 3 answers

- A. Lead assignment
- B. Account and Lead ownership
- C. Contact association with correct Account
- D. Page layout assignments
- E. Data transformation against source system

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 23

Universal Containers has seven orgs in different regions. Its processes are global and standardized but each region needs the flexibility to be able to understand the global code and customize some aspects for its regions.

Which development model is optimized for this need?

- A. Create a centralized Git with all the code and where the global team approves the changes made by the local teams.
- B. Use a managed package to deploy the global code and allow local teams to request the addition of code within that package.
- C. Use a managed package for global code and another managed package for all regions code.
- D. Use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions,

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 24

Universal Containers is about to begin the release of a major project. To facilitate this, they have several sandboxes to make their deployment train. These sandboxes are a mix of preview and non-preview instances.

What should the architect recommend?

- A. No advice needed, mixing instance types is important for regression testing.
- B. Contact support to rollback the release when Salesforce upgrades the sandboxes,
- C. Refresh all non-preview sandboxes when the release management team has time.
- D. Refresh all non-preview sandboxes during the release preview window.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 25

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API.

What is the best practice for making sure these components are deployed successfully?

- A. Document deployment steps for any components that cannot be automatically deployed
- B. Utilize the metadata API's deployAllComponents call
- C. Generate and install a managed package that enables the required settings
- D. Generate and deploy a change set that enables the required settings

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 26

Universal Containers has just completed several projects, including new custom objects and custom fields.

Administrators are having difficulty maintaining the application due to not knowing how objects and fields are being used.

Which two options should an Architect recommend? (Choose two.)

- A. Create design standards to consistently use the description field on custom fields.
- B. Create design standards with a document to store all custom objects and custom fields.
- C. Create design standards to consistently use the description field on custom objects.
- D. Create design standards to require all custom fields on all custom object page layouts.
- E. Create design standards to require help text on all custom fields and custom objects.

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 27

Due to several issues, Universal Containers wants to have better control over the changes made in the production org and to be able to track them. Which two options will streamline the process? Choose 2 answers

- A. Use Metadata API to automate deployment to the production.org
- B. Make all code/configuration changes directly in the production org.
- C. Allow no code/configuration changes directly in the production.org
- D. Use the Force.com IDE to automate deployment to the production.org

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 28

Which two project situations favor an Agile methodology? Choose 2 answers

- A. A digitization project to update an existing customer -facing process and enable quick adjustments (Missed)
- B. A project with well-defined requirements and complex interactions between front- and back -end systems
- C. An environment with a heavy investment in DevOps capabilities for rapid testing and deployment (Missed)
- D. A project to be executed by a third party, with a fixed and formal scope, budget, and timeline

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 29

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it is not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts
- B. Apex Settings to allow the access to metadata is not switched on
- C. UC needs to turn on Apex Settings within the custom metadata type
- D. UC needs to get the managed package certified by the Salesforce security review

Answer: C (LEAVE A REPLY)

NEW QUESTION: 30

Universal Containers would like to conduct performance testing on its new major release.

What three things should the architect consider when discussing performance testing?

Choose 3 answers

- A. Salesforce must be informed at least 7 days before starting performance tests.
- B. A business justification must be provided to Salesforce in order to run performance testing.
- C. Salesforce will monitor test activity to ensure there are no issues with Salesforce Services.
- D. Performance tests may be run without advanced notice, but Salesforce will not store performance logs.
- E. Performance tests must be run in a sandbox.

Answer: B,C,E (LEAVE A REPLY)

NEW QUESTION: 31

Universal Containers (UC) is embarked on a large Salesforce transformation journey, UC's DevOps team raised a question about tracking Salesforce metadata throughout the development lifecycle across sandboxes all the way to production.

As the deployment architect of the project, what should be the recommendation to track which version of each feature in different environments?

- A. Use Salesforce SFDX commands to deploy to different sandboxes.
- B. Use an AppExchange or third-party tool that is specialized in Salesforce deployment.
- C. Use ChangeSet to track deployed customizations.
- D. Use an Excel sheet to track deployment steps and document the SFDX commands.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 32

At any given time, Universal Containers has 10 Apex developers building new functionality and fixing bugs.

Which branching strategy should an Architect recommend that mitigates the risk of developers overwriting others changes?

- A. Have all developers work in the same branch, continuously testing for regressions
- B. Don't use source control. Rely on Salesforce's built-in conflict detection mechanism
- C. Have developers work in separate branches and merge their changes in a common branch for testing
- D. Have all developers build new functionality in new branches, but fix bugs in the HEAD

Answer: C (LEAVE A REPLY)

NEW QUESTION: 33

Which are two key benefits of fully integrating an Agile issue tracker with software testing and continuous integration tools? (Choose two.)

- A. Developers can observe their team velocity on the burn chart report in the Agile tool.
- B. Developers can see automated test statuses post code-commit on a specific user story.
- C. Developers can collaborate and communicate effectively on specific user stories.

D. Developers can see the committed code's build status directly on the user story record.

Answer: B,D ([LEAVE A REPLY](#))

NEW QUESTION: 34

Universal Containers (UC) has a huge volume of metadata that cannot be deployed at once. What is the recommended strategy for UC to be successful with the deployment?

- A. Sort and group the metadata alphabetically and deploy them in the same order.
- B. Use a combination of the Ant migration tool and change sets for deployment.
- C. Identify metadata dependencies, create logical groupings, and deploy in the right order.
- D. Use a continuous integration tool such as Jenkins to deploy in the right order.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 35

Universal Containers (UC) is planning for a huge data migration from a homegrown on-premise system to Salesforce as part of their Service Cloud implementation. UC has approximately 5 million customers, 10 million contacts, and 30 million active cases.

Which three key areas should be tested as part of Data Migration? (Choose three.)

- A. Data transformation against the source system.
- B. Page Layout assignment to the profiles.
- C. Case Ownership, along with associated entitlement and milestones.
- D. Case assignment rules and escalation rules.
- E. Case association with correct Contact and Account.

Answer: A,C,E ([LEAVE A REPLY](#))

NEW QUESTION: 36

Universal Containers wants to introduce data volume testing to resolve ongoing performance defects earlier in the lifecycle. Regulations prohibit the use of production data in non-production environments.

Which two options can the architect recommend? (Choose two.)

- A. Generate mock data that mimics production data shape and volume
- B. Request a partial Sandbox copy after the next Salesforce release
- C. Perform data masking on full sandbox after a refresh
- D. Use Query Analyzer in production

Answer: ([SHOW ANSWER](#))

Explanation

NEW QUESTION: 37

What are three advantages of the package development model?

Choose 3 answers

- A. Facilitating automated testing and continuous integration.
- B. Improving team development and collaboration.

- C. Eliminating the need of using change set, which should no longer be used as it can get messy working with package development models.
- D. Providing its own source control, so the source can be deployed In any sandbox orgs.
- E. Significantly reducing the need for manually tracking changes.

Answer: (SHOW ANSWER)

NEW QUESTION: 38

Which two statements are accurate about why Mock objects are needed when writing test classes?

Choose 2 answers

- A. Some methods are invoking long running processes, using Mock is a shortcut of bypassing the long executions.
- B. A Mock is needed whenever the code makes an HTTP callout.
- C. Mock can also be used on the classes that extend the batchable interface to bypass the batch jobs.
- D. Using a Mock allows the test class to bypass the dependencies of other objects, methods, state, or behaviors. Therefore, the developer has total control of his own code.

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 39

Universal Containers has a complex deployment coming up. The deployment will include several Apex classes which depend on custom settings that hold important configuration. How should an Architect manage this deployment?

- A. Manually deploy and populate custom settings in production using a change set
- B. Create a custom metadata type and include this in your deployment to production
- C. Script the deployment of all functionality via the Force.com Migration Tool
- D. Manually deploy and populate the custom settings in production prior to the Apex Class deployment

Answer: (SHOW ANSWER)

NEW QUESTION: 40

Universal Containers (UC) has used Salesforce for the last 6 years with 50% custom code. UC has recently implemented continuous integration. UC wants to improve old test classes whenever new functionality invalidates tests. UC also wants to reduce the deployment time required.

What should an Architect recommend?

- A. Execute all test classes in sandboxes and selected test classes in Production.
- B. Do NOT execute all test classes in sandboxes and Production.
- C. Do NOT execute test classes in sandboxes and all test classes in Production.
- D. Test classes CANNOT be executed in sandboxes.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 41

Cloud Kicks (CK) is launching a new sneaker line during the upcoming holiday season and needs to do a thorough batch data testing before Go-Live. CK is using Salesforce unlimited edition.

What two sandbox types should the architect recommend for batch data testing? (Choose two.)

- A. Partial Copy sandbox
- B. Full sandbox
- C. Developer sandbox
- D. Developer Pro sandbox

Answer: (SHOW ANSWER)

Explanation/Reference: <https://www.appfrontier.com/blog/how-to-test-in-a-salesforce-sandbox/>

NEW QUESTION: 42

Universal Containers (UC) is using custom metadata types to control the behavior of a few of the custom functionalities. UC wants to Deploy custom metadata types to production using Metadata API.

Which two data types does UC need to include?

Choose 2 answers

- A. CustomObject
- B. CustomMetadataType
- C. CustomMetadata
- D. Custom Field

Answer: B,D (LEAVE A REPLY)

NEW QUESTION: 43

Universal Containers has a large call center that has a limited inventory and must ensure there is product availability before an Opportunity is marked as Closed. Custom Apex has been implemented to check inventory levels before an Opportunity is saved. What should an architect consider before recommending Performance testing?

- A. Number of debug log entries
- B. Number of concurrent transactions
- C. Number of unit tests
- D. Number of Apex Hammer failures

Answer: B (LEAVE A REPLY)

NEW QUESTION: 44

Universal Containers (UC) operates globally from different geographical locations. UC is revisiting their current org strategy. Which three factors should an Architect consider for a single strategy? Choose 3 answers

- A. Tailored implementation.
- B. Centralized data location.
- C. Consistent processes across the business.
- D. Increased ability to collaborate.
- E. Fewer inter Dependencies.

Answer: B,C,D (LEAVE A REPLY)

NEW QUESTION: 45

A Salesforce partner intends to build a commercially available application by creating a managed package for distribution through AppExchange.

What two types of environments can the partner use for development of the managed package? Choose 2 answers

- A. Partner Developer Edition
- B. Developer Edition
- C. Developer sandbox
- D. Developer Pro sandbox

Answer: A,C (LEAVE A REPLY)

NEW QUESTION: 46

Universal Containers (UC) is preparing for the new Salesforce release in a couple of months, and has several ongoing development projects that may be affected. Which three steps should the team at UC take to prepare for this release? Choose 3 answers

- A. Refresh a Sandbox during the Release Preview Window to ensure they have the upcoming release.
- B. Review the release notes for automatically-enabled features and technical debt.
- C. Contact Salesforce to schedule a time to upgrade the full Sandbox.
- D. Upgrade any SOAP integrations to the newest WSDL as early as possible
- E. Run regression tests in an upgraded sandbox to detect any issues with the Upgrade.

Answer: A,B,E (LEAVE A REPLY)

NEW QUESTION: 47

Universal Containers's architect is documenting the application lifecycle management (ALM) process to communicate it to the development teams from different implementation partners.

Which three steps apply to any Salesforce development project?

Choose 3 answers

- A. Develop
- B. Test
- C. Continuous Integration
- D. Change Sets
- E. Build Release

Answer: B,C,E ([LEAVE A REPLY](#))

NEW QUESTION: 48

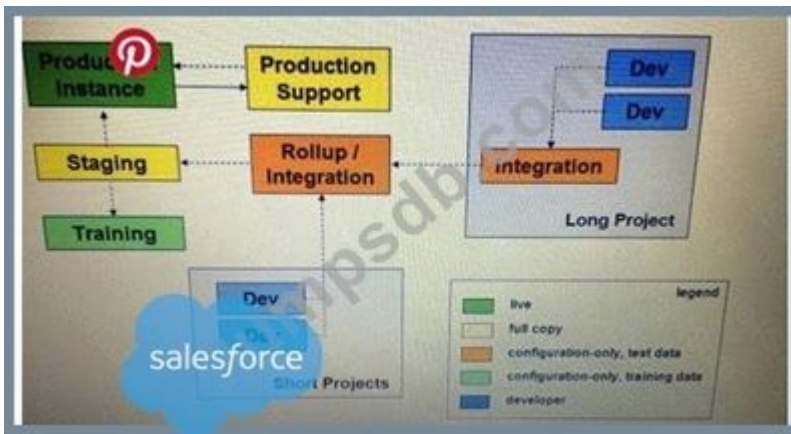

Universal Containers (UC) currently uses the org development model and utilizes the Salesforce CLI as the deployment tool. After the feature release artifact (a .zip file) has been tested in a lower sandbox, it is being deployed to the full sandbox for performance testing and production deployment readiness check-Since quick deployment options are not being used, what is the correct way to deploy the artifact to the full sandbox?

- A. Authorize to the Full sandbox; validate with sfdx: source: deploy; On successful validation, deploy with sfdx;mdapi;deploy
- B. Authorize to the Full sandbox org; Validate with sfdx:source:deploy; On successful validation, deploy with sfdx:source:deploy
- C. Authorize to the Fullsandbox org; Validate with sfdx:mdapi:deploy; On successful validation, deploy with sfdx:mdapi:deploy
- D. Authorize to the Fullsandbox org; Validate with sfdx:mdapi:deploy; On successful validation, deploy with sfdx:source:deploy

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 49

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

A. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging.

Deploy from Staging to Production at go-live

B. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live

C. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live

D. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live

Answer: D (LEAVE A REPLY)

NEW QUESTION: 50

What is the process used to initiate a connection for change sets?

A. Modify the source org to allow an outbound connection to the target org

B. Modify the target org to accept an inbound connection from the source org

C. Modify the source org to allow an inbound connection to the target org

D. Modify the target org to accept an outbound connection from the source org

Answer: (SHOW ANSWER)

NEW QUESTION: 51

Universal Containers (UC) is planning for a huge data migration from a home grown on-premise system to Salesforce as part of their Service Cloud Implementation. UC has approximately 5 million customers, 10 million contacts, and 30 million active cases. Which are the three key areas that should be tested as part of Data Migration? Choose 3 answers

A. Page Layout assignment to the profiles

B. Data transformation against the source system.

C. Case association with correct contact and Account.

D. Case Ownership along with associated entitlement and milestones.

E. Case assignment rules and escalation rules.

Answer: (SHOW ANSWER)

NEW QUESTION: 52

Universal Containers has five development teams. The performance of the teams has been good, but the number of bugs has been increasing. After each sprint, they need more time to understand the code and make changes.

What are two ways to improve the performance?

Choose 2 answers

- A. Define and follow code standards.
- B. Sprint review process.
- C. Define a team that will analyze/approve all changes.
- D. Version control system to identify who is generating the bugs.

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 53

Which statement is true for the Staging sandbox in the following diagram?

- A. The Staging sandbox is automatically refreshed on a schedule set by the administrator
- B. Salesforce major releases (e.g., Winter to Spring) always occur in Staging and Production at the same time
- C. When created or refreshed, the Staging sandbox is a full replica of Production
- D. The Staging environment can only be updated once every two weeks

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 54

Which are two key benefits of fully integrating an agile issue tracker with software testing and continuous integration tools? Choose 2 answers?

- A. Developers can use the committed code's build status directly on the user story record.
- B. Developers can see automated test statuses post code commit on a specific user story.
- C. Developers can collaborate and communicate effectively on specific user stories.
- D. Developers can observe their team velocity on the burn chart report in the agile tool.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 55

Which two decisions should be made by an Architecture Review Board (ARB)? Choose 2 answers

- A. Whether to implement Single Sign -On with SAML or delegated authentication c
- B. Whether to create a new Salesforce object or override an existing object using a new Record Type
- C. What testing tools should be used to track integration testing requirements
- D. Whether to utilize the Waterfall or Agile methodology on the project

Answer: A,B (LEAVE A REPLY)

NEW QUESTION: 56

Universal Containers (UC) has been on the org development model with scratch orgs already enabled, but they haven't been taking advantage of the scratch orgs.

Now UC is ready to move to the package development model.

What step must be done by an administrator?

- A. In setup, switch both the Enable Dev Hub and Enable 2nd-Generation Managed Packages to Enabled.
- B. In setup, switch the Enable Unlocked Packages and Second-Generation Managed Packages to Enabled.
- C. In setup, switch the Enable Unlocked Packages to Enabled, keep the Enable Second-Generation Managed Packages as disabled.
- D. In setup, switch the Enable Dev Hub to Enabled, then switch the Enable Source Tracking for Scratch Orgs to Enabled.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 57

A team has completed a sprint and intends to deploy these changes after business approval, but they will immediately begin the next sprint.

What strategy should an architect recommend?

- A. Commit upcoming changes to the features branch without merging into the develop branch. Deploy from the develop branch and then merge new sprint features into the develop branch.
- B. Migrate the current code to the UAT sandbox. Begin new sprint development in the Dev sandbox. Make fixes in the UAT environment and deploy UAT for production after business approval
- C. Using Git, create a release branch from the develop branch. All fixes must be made in the release branch.
After deployment, merge release with develop.
- D. The first task of the new sprint must be the deployment approval. After that, the other tasks of the sprint can be performed in the environments and Git

Answer: B (LEAVE A REPLY)

NEW QUESTION: 58

Universal Containers (UC) has received feedback from the field on several new feature requests that are aligned with key business goals. UC is looking for a way to quickly get feedback and prioritize these requests.

Which two options should an Architect recommend? (Choose two.)

- A. Present the feature requests at a Center of Excellence meeting.
- B. Send the requests to IT for a formal review at the end of the year.
- C. Create a backlog or priority list in a project management tool.
- D. Bring the feature request to the Test Manager to gain quality checks.
- E. Create design standards around the new features being requested.

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 59

Universal Containers has seven orgs in different regions. Its processes are global and standardized but each region needs the flexibility to be able to understand the global code and customize some aspects for its regions.

Which development model is optimized for this need?

- A. Use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions,
- B. Use a managed package to deploy the global code and allow local teams to request the addition of code within that package.
- C. Use a managed package for global code and another managed package for all regions code.
- D. Create a centralized Git with all the code and where the global team approves the changes made by the local teams.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 60

Universal Containers (UC) uses a managed package to install an internal Sales app in five orgs. Within each org there are integrations and local processes with the objects of the managed package. UC wants to use unlocked packages for better integration with CI/CD processes.

What would the Salesforce architect recommend for this migration?

- A. Migrate all classes, Visualforce, and components from the managed package to the unlocked package. Install the new version of the managed package (objects/fields only) and the unlocked package with the other components.
- B. Export all data from objects/fields of the managed package, uninstall it, install the unlocked package without namespace and restore all data.
- C. Export all data from objects/fields of the managed package, uninstall it, install the unlocked package with the same namespace as the Managed package and restore all data.

D. Do not change to unlocked package as it is possible to perform all CI/CD processes with the managed package.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 61

Which two groups are responsible for the creation and execution of Release Management processes? Choose 2 answers

A. Center of Excellence (Missed)

B. Steering Committee

C. End Users

D. Dev/Build Team (Missed)

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 62

Northern Trail Outfitters (NTO) has well-defined release management processes for both large and small projects. NTO's development team created a workflow and a trigger for the changes in its opportunity renewal process.

What should the architect recommend for release planning of these changes?

A. Plan this as a minor release with training and change management.

B. Plan this an interim release after checking with Salesforce support.

C. Plan this as a major release and align with a Salesforce major release.

D. Plan this as a patch release and align with the Salesforce patch release.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 63

Universal Containers has a stable continuous integration process and all stakeholders are happy. However, user testing takes a long time, as data has to be set up.

What should an Architect do to address this problem?

A. Include automated sample data during deployment.

- B. Train business users to create test data more efficiently.
- C. Test data creation is outside the scope of continuous integration.
- D. Advise the project manager to assign more users to create test data.

Answer: (SHOW ANSWER)

NEW QUESTION: 64

Universal Containers uses multiple Salesforce orgs for its different lines of business (LOBs). In a recent analysis, the architect found that UC could have a more complete view of its customers by gathering customer data from different orgs.

What two options can an architect recommend to accomplish the customer 360-degree view?

Choose 2 answers

- A. Implement a Complete Graph multi-org strategy by allowing each org to connect directly to every other, reading and writing customer data from the orgs where it has been originally created.
- B. Implement a Single Package multi-org strategy by developing and deploying to all orgs a managed package which reads and consolidates customer 360-degree view from the different orgs.
- C. Migrate from multi-org to single-org strategy, consolidating customer data in the process.
- D. Implement a Hub-and-Spoke multi-org strategy by consolidating customer data in a single org, which will be the master of customer data, and using integration strategies to let the LOBs orgs read and write from it.

Answer: B,D (LEAVE A REPLY)

NEW QUESTION: 65

Universal Containers is in the process of testing their integration between Salesforce and their on-premise Enterprise Resource Planning systems. The testing team has requested a sandbox with up to 10,000 records in each object to benchmark the integration performance.

What is the fastest approach an Architect should recommend?

- A. Spin off a Developer Pro sandbox, migrate the metadata, and load the data using data loader
- B. Spin off a Full copy sandbox with all the objects that are required for testing the integration.
- C. Spin off a Partial copy sandbox using a sandbox template with all the objects required for testing the integration.
- D. Spin off a Development sandbox, migrate the metadata, and load the data using data loader.

Answer: C (LEAVE A REPLY)

Explanation

NEW QUESTION: 66

Universal Containers is having trouble aligning releases between major, minor, and Salesforce seasonal releases.

What should an architect recommend?

- A. Share the test plans between the teams on each release type.
- B. Create a spreadsheet of metadata changes and reconcile the overlaps.
- C. Gate all release decisions at the center of excellence.
- D. Create a release calendar, train and align all the teams.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 67

Which two environments are appropriate for creating a managed package? Choose 2 answers

- A. Developer Edition Org
- B. Production Org with LMA
- C. Developer Pro Sandbox Org
- D. Partner Developer Edition Org

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 68

Universal Containers (UC) maintains its Salesforce org using its internal tools and processes for managing its application lifecycle. The UC team has been facing challenges on their development processes in their recent two releases. The architect has recommended the UC team to follow the org development model to address the challenges faced.

Which two characteristics of the org development model will help UC address the challenges?

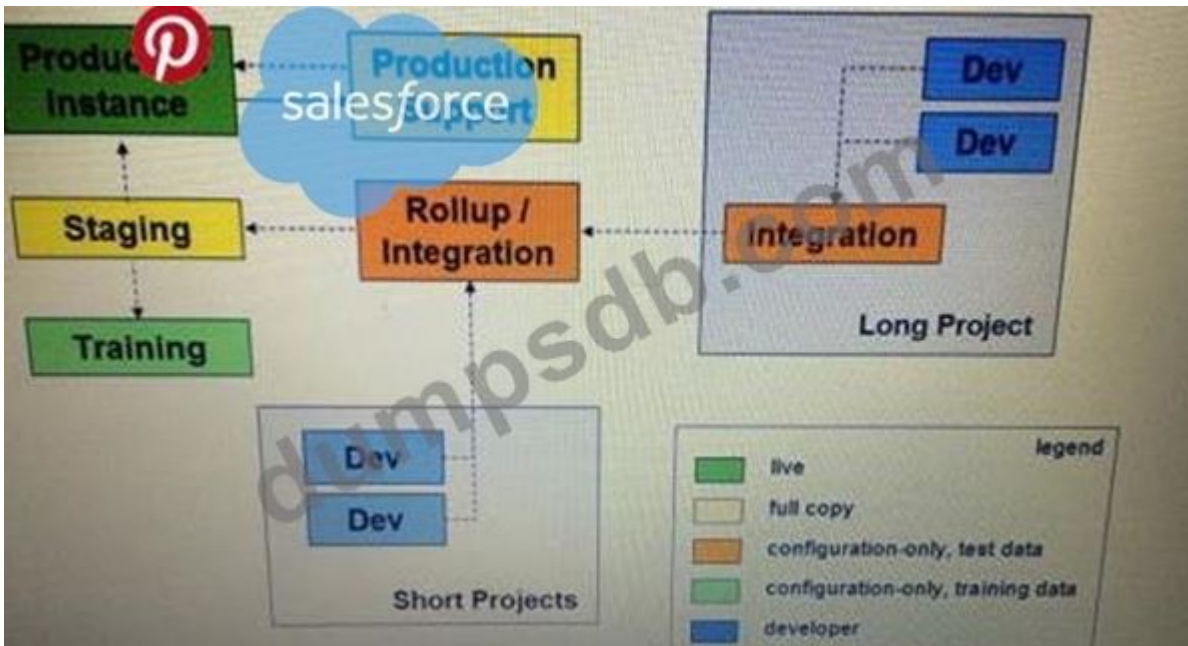

Choose 2 answers

- A. Automated change tracking
- B. Automated defect fixing
- C. Automated deployment
- D. Automated sandbox provisioning

Answer: A,C (LEAVE A REPLY)

NEW QUESTION: 69

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

A. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging.

Deploy from Staging to Production at go-live

B. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live

C. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live

D. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live

Answer: D (LEAVE A REPLY)

NEW QUESTION: 70

Universal Containers has decided on a single-org strategy, despite having to deal with the complexity of having multiple lines of business (LOBs) inside a single org.

What are two common challenges in single-org strategy for multiple LOBs? (Choose two.)

A. Lack of declarative sharing and visibility capabilities to ensure correct visibility of objects and records

B. Apex design will need to be mature and adhere to strict guidelines to support a large enterprise model

C. The data model becomes more complex the scope in the org increases

D. Making Salesforce work with multiple currencies

Answer: B,C (LEAVE A REPLY)

Explanation/Reference: <https://developer.salesforce.com/blogs/developer-relations/2014/10/enterprise-architecture-multi-org-strategy.html>

NEW QUESTION: 71

Universal Containers (UC) is looking for advice on how often it should refresh its sandboxes. UC currently uses a development lifecycle that starts with developer environments and moves to integration testing, QA testing, UAT, and then production. They have many scrum teams working concurrently and the teams do not agree on when refreshes should occur.

What two recommendations should the architect suggest?

Choose 2 answers

- A.** Sandboxes should be refreshed on the day when the refresh is allowed for that type of sandbox.
- B.** Integration sandboxes should be refreshed rarely because of the burden of maintaining the various API.
- C.** Development environments should generally be refreshed after each working feature has been successfully migrated.
- D.** Production is the only pristine environment.

Answer: B,D (LEAVE A REPLY)

NEW QUESTION: 72

Universal Containers is adopting Scrum as an agile methodology and wants to choose a software tool to support the adoption. What three key features of an agile development support tool should an architect look for? Choose 3 answers

- A.** Email notifications when work is created or changed
- B.** Sprint backlog management
- C.** Work (for example, user stories or tasks) assignment
- D.** Product backlog prioritization
- E.** Kanban board

Answer: C,D,E (LEAVE A REPLY)

NEW QUESTION: 73

Universal Containers (UC) is developing a custom Force.com application. The following tools are used for development, the Force.com IDE for developing apps. Git as a source control system and a Git repository, and the Force.com Migration Tool for updating sandboxes from source control. UC's current branching strategy calls for two main branches: 1) Master 2) Develop Three supporting branches: 1) Feature 2) Release 3) Hotfix Consider that the branching strategy is in parallel as follows Feature | Develop | Release | Hotfix | Master What is the recommended practice strategy that Developers should adopt for Development?

- A.** Developers work off of the Feature branch, which is pulled from the Develop branch, and the Feature branch is then merged with the Hotfix branch.
- B.** Developers work off of the Feature branch, which is pulled from the Release branch, and the Feature branch is then merged with the Develop branch.

- C. Developers work off of the Feature branch, which is pulled from the Master branch and the Feature branch is then merged with the Develop branch.
- D. Developers work off of the Feature branch, which is pulled from the Develop branch, and the Feature branch is then merged with the Develop branch.

Answer: [\(SHOW ANSWER\)](#)

NEW QUESTION: 74

Universal Containers has decided on a single-org strategy, despite having to deal with the complexity of having multiple lines of business (LOBs) inside a single org.

What are two common challenges in single-org strategy for multiple LOBs?

Choose 2 answers

- A. Lack of declarative sharing and visibility capabilities to ensure correct visibility of objects and records.
- B. Apex design will need to be mature and adhere to strict guidelines to support a large enterprise model.
- C. The data model becomes more complex the scope in the org increases.
- D. Making Salesforce work with multiple currencies.

Answer: [B,C \(LEAVE A REPLY\)](#)

NEW QUESTION: 75

What is a main characteristic of an agile team?

- A. The team has biweekly sprints to ensure on-time delivery.
- B. The team improves and evolves its processes and frequently delivers value to the endusers.
- C. The team delivers new releases on dates defined in the beginning of the project, following a project plan
- D. The team uses Scrum, Kanban, and Extreme Programming.

Answer: [B \(LEAVE A REPLY\)](#)

NEW QUESTION: 76

Universal Containers has recently acquired another business that uses Salesforce extensively. UC wants to merge their Salesforce Orgs to effectively sell and service customer under one business. Traditionally, UC has followed an agile development methodology to deliver Salesforce functionality. With the merging businesses, UC is convinced that adopting a Waterfall development methodology is the best approach. Which are two positive aspects of using a Waterfall development methodology?

- A. Complex processes that will need to be built are thoroughly understood and documented before coding begins.
- B. Changes late in the process are expected and can be handled by integrating them into the requirements specs.

C. The costs of starting the project are low since much of the design work is pushed to later stages of the process.

D. Milestones, timelines and estimates tend to be more accurate and predictable due to the upfront due diligence.

NEW QUESTION: 77

Universal Containers has just initiated a project to implement a custom container tracking application with a large development team. The project manager is concerned that the large number of developers in a single developer pro sandbox could lead to challenges with code being overwritten. Which two methods should be used to mitigate this risk?

Choose 2 answers

A. Provide each developer their own sandbox developer org, and implement managed packages to deploy to the merge

B. Use a single sandbox and strictly coordinate development across shared components, and implement a code repository to allow developers to merge code into a common repository

C. Provide each developer their own sandbox developer org and implement a code repository and continuous integration to merge code into the developer pro sandbox

D. Replace the developer pro sandbox with a Partial copy sandbox

Answer: (SHOW ANSWER)

NEW QUESTION: 78

Universal Containers (UC) has four different business units (BUS) with different processes that shares global customers. They have implemented a multi-orgstrategy with one org consolidating customer 360-degree view, and four orgs for the different BUS. Each of the BU orgs read and write customer information from/to the customer 360-degree view org in real time. UC is now launching a new BU that will use Salesforce. It does not share customers with the other BUS and needs flexibility in their Business processes.

What should an architect recommend as org strategy for this new BU

- A. Use a new Salesforce org for the new BU, and customize integration so that it reads and writes customer information from the customer data org
- B. Use the same Salesforce org of another BU that shares geographical localization with the new BU.
- C. Deploy the new BU in customer 360-degree view org, and read and write customer information from it without need of custom integration.
- D. Use a new stand-alone Salesforce org for the new BU, not integrated with the others.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 79

Universal Containers (UC) is considering updating their Salesforce Production Deployment as a part of their Release Mgmt process. Which three best practices should UC consider for Production Deployment? Choose 3 ans.

- A. Temporarily suspend configuration changes in production.
- B. Announce the maintenance window ahead of time.
- C. Schedule releases with Salesforce upgrades.
- D. Define a rollback strategy.
- E. Lert all users on the day of deployment.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 80

Universal Containers' developers are working on a Visualforce page in a sandbox when an administrator adds a new field to Production. Which two approaches could an architect suggest to an administrator that would assist the developers in their development process? Choose 2 answers

- A. Manually replicate the same changes in the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on
- B. Use a Change Set to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on (Missed)
- C. Use Salesforce-to-Salesforce to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on
- D. Refresh the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on (Missed)

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 81

Universal Containers is delivering many changes to its Salesforce system. Adoption reports are discovering that many features are unused. The steering committee wants this to change and is looking to the architect for advice.

What should an architect recommend to overcome this?

- A. Stop development until current features start being used.
- B. Using Lightning Web Components for every user interface.
- C. Sending weekly communication emails reporting on least engaged users
- D. Adopting user centered design to understand user needs before building the solution.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 82

Universal Containers (UC) has developed extensions of Salesforce Service Cloud for the use of its customer service teams using the change set development model.

Recently, UC acquired a company that develops extensions of an AppExchange app. The development team of the acquired company uses the org development model. The Universal Containers CTO wants both teams to work on a single org and follow the same set of processes.

Which development model should the architect recommend to be used by the consolidated development team?

- A. Package development model, so teams can build release artifacts that can be tested and released independently from artifacts for other projects
- B. Package development model, because it allows packages to be created and deployed using declarative (point-and-click) development tools, without writing code
- C. Org development model, because the acquired company's team is already using it, and it is better than the change set development model
- D. Change set development model, because UC is already using it, so it will face less resistance

Answer: A (LEAVE A REPLY)

NEW QUESTION: 83

Universal Containers operates from North America and does business within North America. UC has just acquired a local company in Asia to start operating from Asia.

Currently, these two business units operate in two different languages. Both units have different sales processes and have to comply strictly with local laws.

During the expansion phase, UC would like to focus on innovation over standardization.

What should an architect recommend given the scenario?

- A. Opt for Multi-org strategy, each org have its own sales process, common rules and operate in locale
- B. Opt for Single-org strategy, standardized sales process, common rules, and business unit-specific locale

C. Opt for Single-org strategy, standardized sales process, common rules, and same locale for all business units.

D. Opt for Multi-org strategy, standardized sales process, common rules, and same locale across orgs.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 84

Universal Containers wants to implement a release strategy with major releases every four weeks and minor releases every week. Major releases follow Development, System Integrated Testing (SIT), User Acceptance Testing (UAT) and Training. Minor releases follow Development and UAT stages.

What represents a valid environment strategy consideration for UAT?

A. Minor and Major releases use the same Full copy.

B. Minor releases use Partial copy and Major releases use Full copy.

C. Minor releases use Developer and Major releases use Full copy.

D. Minor and Major releases use separate Developer pro.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 85

Universal Containers wants to implement a release strategy with major releases every four weeks and minor releases every week. Major releases follow Development, System Testing (SIT), User Acceptance Testing (UAT) and Training. Minor releases follow Development and User Acceptance Testing (UAT) stages. What represents a valid environment strategy consideration for UAT?

A. Minor releases use Partial copy and Major releases use Full copy

B. Minor and Major releases use same Full copy.

C. Minor releases use Developer and Major releases Full copy

D. Minor and Major releases use separate Developer pro

Answer: (SHOW ANSWER)

NEW QUESTION: 86

Universal Containers (UC) has created a custom REST web service. This web service receives Orders and Order Line Items data from an external endpoint and runs business logic and validations on it before inserting it into the database. UC is expecting to receive more than 100K orders a day and each order can have up to 10 line items. Each inbound request will contain only one order and its corresponding line items.

What two testing types should an architect recommend to ensure users don't face platform slowdowns during peak business hours? Choose 2 answers

A. Load Testing

B. Unit Testing

C. Stress Testing

D. Performance Testing

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 87

Which two options should be considered when making production changes in a highly regulated and audited environment?

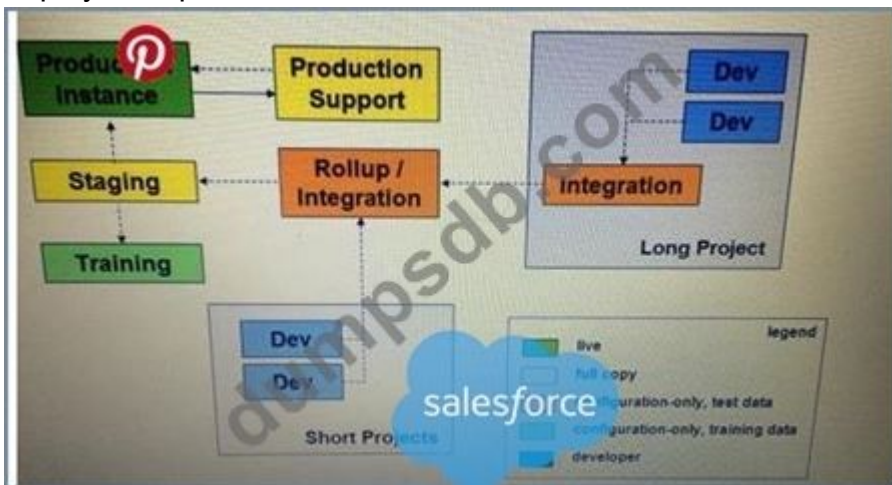

Choose 2 answers

- A. No manual steps should be carried out.
- B. Any production change should have explicit stakeholder approval.
- C. All changes including hotfixes should be reviewed against security principles.
- D. After deployment, the development team should test and verify functionality in production.

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 88

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

- A. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live
- B. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live
- C. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging.
Deploy from Staging to Production at go-live
- D. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 89

Universal Containers (UC) has been on the org development model with scratch orgs already enabled, but they haven't been taking advantage of the scratch orgs.

Now UC is ready to move to the package development model.

What step must be done by an administrator?

- A.** In setup, switch the Enable Unlocked Packages to Enabled, keep the Enable Second-Generation Managed Packages as disabled.
- B.** In setup, switch both the Enable Dev Hub and Enable 2nd-Generation Managed Packages to Enabled.
- C.** In setup, switch the Enable Dev Hub to Enabled, then switch the Enable Source Tracking for Scratch Orgs to Enabled.
- D.** In setup, switch the Enable Unlocked Packages and Second-Generation Managed Packages to Enabled.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 90

Universal Containers' developers are working on a Visualforce page in a sandbox when an administrator adds a new field to Production. Which two approaches could an architect suggest to an administrator that would assist the developers in their development process?

Choose 2 answers

- A.** Use Salesforce-to-Salesforce to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on
- B.** Refresh the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on
- C.** Use a Change Set to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on
- D.** Manually replicate the same changes in the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 91

Universal Containers wants to delete the day's test data in a partial copy sandbox every night, setting the sandbox back to a fresh state for tomorrow's testing. The test data is approximately 1GB.

What is the best strategy the architect should recommend?

- A.** Manually delete all records individually.
- B.** Create a new developer copy sandbox every night.
- C.** Execute a batch job that deletes all records created on the day.
- D.** Refresh the sandbox every night.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 92

Universal Containers (UC) is developing a new Customer Community. Requirements for the Community are not fully defined. UC is planning on using an Agile methodology for this work and has promised delivery of the complete system in three months. What are two risks associated with this approach? Choose 2 answers

- A.** Given the lack of requirements and the three-month timeline commitment, the project may not be feasible (Missed)
- B.** Agile does not allow for changes to requirements, so customers might not like the resulting solution
- C.** The functionality that can be delivered in 3 months is unknown, and may not meet the needs of the business (Missed)
- D.** Agile is not an appropriate development methodology for Customer Community implementations

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 93

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A.** Whether Salesforce will wait to upgrade the pod until after a UC release is complete.
- B.** When to test a new UC feature release if there are issues.
- C.** How to test existing functionality to ensure no regressions are introduced.
- D.** How to roll back to the previous Salesforce release if there are issues.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 94

Universal Containers is having trouble deploying metadata from SIT to UAT. UAT is complaining that it does not recognize some new Salesforce metadata types to be deployed. The deployment from Dev to SIT worked perfectly. What could be the problem?

- A. UAT is on a preview release and SIT is not.
- B. There is no problem, this is expected behavior.
- C. Use the DX command line instead.
- D. SIT is on a preview release and UAT is not.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 95

Universal Containers (UC) is implementing Service Cloud for their contact centers for 3000 users. They have

~10 million customers. The average speed response time expected is less than 5 seconds with 1,500 concurrent users. What type of testing will help UC measure the page response time?

- A. Unit Testing.
- B. Load testing.
- C. System Integration Testing.
- D. Stress Testing.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 96

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it's not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. UC needs to turn on Apex Settings within the custom metadata type.
- B. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts.
- C. Apex Settings to allow the access to metadata is not switched on.
- D. UC needs to get the managed package certified by the Salesforce security review.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 97

Universal Containers (UC) is a large enterprise with a complex system landscape. UC is currently rolling out new infrastructure and strategies around Salesforce DevOps. Some of the key features UC is looking to support is rollback of metadata after a deployment, and the backup and restore of data to help recover from deployment issues, system bugs, or outages in their downstream systems.

Regulations in the industry mean that UC must be able to provide strategies to recover and rollback from issues. The regulator has discovered UC is not currently providing these, and must do so as soon as possible to remain compliant.

What should an architect advise?

- A. Salesforce backs up all data and will restore it for customers on request.
- B. Custom build a feature rollback and data restore tool for Salesforce
- C. Advise stakeholders that rollback is not possible for Salesforce.
- D. Evaluate third-party and AppExchange products.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 98

What is the responsibility of an executive sponsor on a project?

- A. Determine project methodology
- B. Approve changes to project scope
- C. Design executive dashboards
- D. Communicate project status

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 99

Universal Containers has started building a customer Lightning community that contains a few dozen Aura components. The development team lead has come to the Salesforce architect about questions regarding testing the Lightning components.

What two knowledge points can the architect pass to the development team lead?

Choose 2 answers

- A. Install the Lightning test service AppExchange package to enable the Aura component testing.
- B. There is a \$T test helper object that can be used to create the instance of the Lightning component, and it is promise enabled.
- C. The testing can be viewed in the lightning.force.com/c/jasminetests.app URL. The page loads and runs Jasmine test and writes pass/fail information to the screen.
- D. The testing of the JavaScript part of the Aura component can be tested in the Jest framework and the Apex controllers can be tested using test classes.

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 100

Product owners at Universal Containers want to ensure that all the requirements have test cases associated with them so that no functionality is left untested during user acceptance testing.

What project artifact can help meet the needs of the business?

- A. Testing strategy
- B. Test execution plan

- C. User acceptance test scripts
- D. Requirement traceability matrix

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 101

Which are two recommended methods of creating test data in Salesforce?

Choose 2 answers

- A. Utilize Heroku Connect to provide test class data.
- B. Load a CSV as a static resource and reference it in a test class.
- C. Host a mock endpoint to produce sample information from an endpoint.
- D. Reference data from middleware directly within your test class.

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 102

Universal Containers (UC) has been using Salesforce Sales Cloud for many years following a highly customized, single-org strategy with great success so far.

What two reasons can justify a change to a multi-org strategy?

Choose 2 answers

- A. UC wants to use Chatter for collaboration among different business units and stop working in silos.
- B. Acquired company that has its own Salesforce org and operates in a different business with its own set of regulatory requirements.
- C. UC is launching a new line of business with independent processes and adding any new feature to it is too complex.
- D. UC follows a unification enterprise architecture operating model by having orgs with the same processes implemented for each business unit.

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 103

Universal Containers is starting a Center of Excellence (COE). Which two user groups should an Architect recommend to join the COE?

- A. Executive Sponsors.
- B. Program Team
- C. Call Center Agents
- D. Inside Sales Users.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 104

Universal Container has multiple departments who use Salesforce and request changes: Sales, Service, Back Office, Marketing, etc. Each of these departments makes independent purchase decisions for AppExchange apps, field requests, and page layouts,

resulting in low adoption and under-use of standard Salesforce capabilities. What mechanism should a Technical Architect recommend to increase use of standard Salesforce functionality?

- A. Change Control Board
- B. Requirements Traceability Matrix
- C. Center of Excellence
- D. Project Management Office

Answer: C (LEAVE A REPLY)

NEW QUESTION: 105

Universal Containers (UC) operates from North America and does business within North America. UC has just acquired a local company in Asia to start operating from Asia. Currently, these two business units operate in two different languages. Both units have different sales processes and have to comply strictly with local laws. During the expansion phase, UC would like to focus on innovation over standardization.

What should an Architect recommend given the scenario?

- A. Opt for Multi-org strategy, each org has its own sales process, common rules, and operate in locale.
- B. Opt for Single-org strategy, standardized sales process, common rules, and business unit-specific locale.
- C. Opt for Multi-org.strategy, standardized sales process, common rules, and same locale across orgs.
- D. Opt for Single-org strategy, standardized sales process, common rules, and same locale for all business units.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 106

Universal Containers (UC) is using Salesforce for their sales organization. The sales users have created several dashboards using multiple running users. The admins have also added a few workflow rules that send email notifications to some sales users. What should an Architect consider while planning the deployment of such components? Choose 2 answers

- A. User fields are ignored during metadata deployments and all such users need to be manually created in the target org before starting the deployment.
- B. User Fields are preserved during metadata deployments and Salesforce attempts to locate a matching user in the target org during deployment.
- C. If the username in the source org doesn't exist in the target org, the deployment will stop until the usernames are resolved or removed.
- D. If the username in the source org doesn't exist in the target org, the deployment will continue and Salesforce will automatically create the username in the target org.

Answer: B,C (LEAVE A REPLY)

NEW QUESTION: 107

Universal Containers is looking to construct a continuous integration process to help manage code quality.

Which three tools should be used to enable this? Choose 3 answers

- A. Source Control Tool
- B. Full Sandbox Environment
- C. Force.com Migration Tool
- D. Continuous Integration Build Tool
- E. Project Management Tool

Answer: A,C,D (LEAVE A REPLY)

NEW QUESTION: 108

There are many types of quality assurance techniques that can help minimize defects in software projects.

Which two techniques should an architect recommend, for Universal Containers to incorporate into its overall CI/CD pipeline?

Choose 2 answers

- A. Static code quality analysis
- B. Business verification testing
- C. Stress testing
- D. Automated browser testing

Answer: (SHOW ANSWER)

NEW QUESTION: 109

Universal Containers has development teams working on multiple projects. They are exploring a source control tool to track and manage their code/configuration.

Which two benefits does a source control tool provide? (Choose two.)

- A. Provides the ability to automatically identify issues in code/configuration.

- B. Provides the ability for distributed teams to work in isolation.
- C. Provides the ability to back up code/configuration changes.
- D. Provides automated code/configuration deployments.

Answer: B,C (LEAVE A REPLY)

NEW QUESTION: 110

Universal Containers (UC) has recently acquired other companies that have their own Salesforce orgs. These companies have been merged as new UC business units.

The CEO has requested an architect to review the org strategy, taking into consideration two main factors:

- * The CEO wants business process standardization among all business units.
- * Business process integration is not required as the different business units have different customers and expertise.

Which org strategy should the architect recommend in this scenario, and why?

- A. Single-org strategy, as the high level of business process standardization will be easier to implement in a single org.
- B. Multi-org strategy, as it is uncommon for the diversified business units to get used to working in the same space as the other business units.
- C. Single-org strategy, as costs increase as the number of orgs go up.
- D. A Multi-org strategy, as they could deploy a common managed package into the orgs of the different business units.

Answer: (SHOW ANSWER)

NEW QUESTION: 111

Universal Containers has five development teams. The performance of the teams has been good, but the number of bugs has been increasing. After each sprint, they need more time to understand the code and make changes.

What are two ways to improve the performance?

Choose 2 answers

- A. Version control system to identify who is generating the bugs.
- B. Sprint review process.
- C. Define and follow code standards.
- D. Define a team that will analyze/approve all changes.

Answer: B,C (LEAVE A REPLY)

NEW QUESTION: 112

Universal Containers (UC) has multiple development teams that work on separate streams of work, with different timelines. Each stream has different releases of code and config, and the delivery dates differ between them.

What is a suitable branching policy to recommend?

- A. Leaf-based development

- B. Trunk-based development
- C. Scratch-org-based development
- D. GitHub flow

Answer: D (LEAVE A REPLY)

Explanation/Reference: <https://blog.logrocket.com/the-git-workflow-you-need-how-to-deal-with-multiple-teams-in-a-single-repository-faf5bb17a6e4/>

NEW QUESTION: 113

There has been an increase in the number of defects. Universal Containers (UC) found the root cause to be decreased quality of code.

Which two options can enforce code quality in UC's continuous integration process? (Choose two.)

- A. Introduce manual code review before deployment to the testing sandbox.
- B. Increase the size of the testing team assigned to the project.
- C. Introduce manual code review before deployment to the production org.
- D. Introduce static code analysis before deployment to the testing sandbox.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 114

Universal Containers (UC) has a large user base (>300 users) and was originally implemented eight years ago by a Salesforce Systems Integration Partner. Since then, UC has made a number of changes to their Visual force pages and Apex classes in response to customer requirements, made by a variety of Vendors and internal teams. Which three issues would a new Technical Architect expect to see when evaluating the code in the Salesforce org? Choose 3 answers

- A. Multiple triggers on the same object, making it hard to understand the order of operations.
- B. Duplicated logic across Visual force pages and Apex classes performing similar tasks.
- C. Custom built JSON and String manipulation Classes that are no longer required.
- D. Broken functionality due to Salesforce upgrades.
- E. Multiple unit test failures would be encountered.

Answer: (SHOW ANSWER)

NEW QUESTION: 115

Universal Containers CUC) has multi-cloud architecture in a single org. The Sales Cloud dev team is working in a Dev Pro sandbox (DevProl) of delivering a release In three months. The business requirements from Service Cloud warrant a quicker release in four weeks, but need part of the Sales Cloud work that is completed in DevProl. The decision of using a separate Dev Pro sandbox (DevPro2) is still pending. The DevProl was upgraded to preview for next salesforce major release two weeks ago.

What should an Architect recommend?

- A.** Clone the DevPro1 sandbox and name it DevPro2 for the second work stream to work on the Service Cloud requirements.
- B.** Ask the second work stream team to work on the same DevPro1 sandbox.
- C.** DevPro1 cannot be cloned because it is on a different version from Production. Just create a new DevPro2, and migrate metadata from DevPro1.
- D.** Push back on the requirements because adding another work stream will bring some risks with it.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 116

Universal Containers (UC) has multiple teams working on different projects. Multiple projects will be deployed to many production orgs. During code reviews, the architect finds inconsistently named variables and lack of best practices.

What should an architect recommend to improve consistency?

- A.** Use static code analysis to enforce coding standards.
- B.** Execute regression testing before code can be committed.
- C.** Require pull requests to be reviewed by two developers before merging.
- D.** Create a Center of Excellence for release management.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 117

Universal Containers has discovered a Sev0 defect in production. Tens of thousands of records will be created with incorrect data in minutes, producing significant brand damage as a consequence. The Salesforce administrator has suggested that the defective text field be replaced with a new picklist field directly in production. The page layout will be modified so that the text-field is removed and the new picklist field added.

What should the Salesforce architect advise?

- A.** Deny the suggestion and explain to everyone that the risk is too high and the next release window is on the weekend.
- B.** Pair with the administrator, and review each change as it happens
- C.** Explain that only developers are certified to make changes directly in production.
- D.** Call the security team and begin organizing a penetration test.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 118

Universal Containers has defined a software tool to support Agile processes, but the development team is not regularly updating the status of their work in progress.

What Scrum value is compromised by this bad practice, and why?

- A.** Commitment, because the team is not committed to follow the Agile methodology.
- B.** Focus, because the teams are not focusing in the agile process expected activities.
- C.** Openness, because the team is not open to a new methodology.

D. Courage, because the teams should be transparent about progress and speak up when they need help.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 119

Universal Containers (UC) wants to shorten their deployment time to production by controlling which tests to run in production. UC's Architect has suggested that they run only subsets of tests.

Which two statements are true regarding running specific tests during deployments?

(Choose two.)

A. To run a subset of tests, set the RunSpecifiedTests test level on the DeployOptions object and pass it as an argument to deploy() call.

B. Specify both test classes and individual test methods that are required to be executed, as both are supported in DeployOptions.

C. To run a subset of tests, set the RunLocalTests test level on the DeployOptions object and pass it as an argument to deploy() call.

D. Specifying the test method is NOT supported in DeployOptions; therefore, specify only the test classes that are required to be executed.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 120

Which two statements are accurate about why Mock objects are needed when writing test classes? (Choose two.)

A. Mock can also be used on the classes that extend the batchable interface to bypass the batch jobs.

B. Using a Mock allows the test class to bypass the dependencies of other objects, methods, state, or behaviors. Therefore, the developer has total control of his own code.

C. A Mock is needed whenever the code makes an HTTP callout.

D. Some methods are invoking long running processes, using Mock is a shortcut of bypassing the long executions.

Answer: B,D (LEAVE A REPLY)

Explanation/Reference: <https://trailhead.salesforce.com/en/content/learn/v/modules/unit-testing-on-the-lightning-platform/mock-stub-objects>

NEW QUESTION: 121

Universal Containers (UC) has multiple teams with major projects working concurrently in their own developer sandboxes. After deploying to production, a bug is discovered. Due to tight timelines, the development team has suggested correcting the bug in the user acceptance testing (UAT) environment, which is a full copy sandbox.

What should the architect recommend?

- A.** Since the issue was found in production, it should be treated as a change request and go into the backlog as an enhancement.
- B.** Correcting the bug in UAT is ideal. Since UAT is a full copy, it will be the fastest location to fix and test the resolution.
- C.** The fix should be made in the developer environment where the project work was done. Once the fix has been made, it should go through a full deployment/testing process and adhere to the normal project cadence.
- D.** UC should spin up a new sandbox to use as a hot fix environment. Once the bug is corrected, the change should be applied to production and downstream environments.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 123

Universal Containers has several concurrent projects building new functionality, fixing bugs, and modifying existing functionality. Management would like features to be available to users as quickly as possible, even if the entire project is incomplete. What should an Architect recommend to maintain quality?

- A.** Utilize automated source control, test, and build systems to test and deploy to production
- B.** Require developers to deploy completed code and unit tests directly to production

- C. Deploy all functionality together to ensure all functionality works together without error
- D. Use a spreadsheet to track approved changes that should be released with change sets

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 124

The CEO at Universal Containers (UC) is receiving constant complaints from business stakeholders that the development teams are not frequently delivering value to the end-user. The CEO talked with the CTO, who argues the opposite, explaining that the development teams are delivering value every Sprint.

The architect suggests to the CTO to implement Kanban to solve this disagreement.

How can Kanban help clarify whether value is being delivered to the business?

- A. Kanban traits includes metrics, like lead time and throughput, which increases transparency.
- B. Kanban can make use of the Salesforce Agile Accelerator to speed up delivery.
- C. Kanban limits work in progress, so the executives will know the development team is not overworked.
- D. Kanban teams respond to unplanned work and changes by dropping everything and jumping on the new request, ensuring agility.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 125

Universal Containers (UC) is a high-tech company using SFDX tools and methodologies for its Salesforce development. T UC has moved some of its code and configuration to Unlocked Packages.

Which two best practices should an architect recommend to support UC's new package development strategy?

(Choose two.)

- A. Test developed packages in test environments before installing to production
- B. Move everything in the existing codebase to a single monolithic package
- C. Version control does not need to be used, as packages manage all the code and configuration
- D. Consult the metadata coverage report to identify features supported by packages

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 126

All AppExchange products are subject to Salesforce security reviews.

What is the most common reason that the prospect AppExchange products fail the security review?

- A. Cross-site scripting
- B. SOQL injection
- C. Session hacking

D. CRUD/FLS (field level security)

Answer: D (LEAVE A REPLY)

NEW QUESTION: 127

Universal Containers are using Salesforce for Order Management and has integrated with an in-house ERP system for order fulfillment. There is an urgent requirement to include a new order status value from the ERP system into the Order Status pick list in Salesforce. Which are two considerations when addressing the above requirement? Choose 2 answers

A. The change can be performed in Production, as it is a configuration change.

B. Implement the change in the sandbox, validate, and release to Production.

C. Existing Apex test classes may start failing in Production.

D. Integration with the ERP system may not function as expected.

Answer: A,D (LEAVE A REPLY)
